TCS SUSTAINABILITY POLICY

TCS (EUROPE) LTD - PARTNERS - SUSTAINABILITY POLICY

TCS is fully committed to the continual improvement and development of our sustainability performance. We encourage responsible sourcing of materials throughout the supply chain, from partnering with factories with a clear commitment to minimising environmental impact, to using distribution partners with strong environmental credentials. We have an extensive network of FSC accredited paper factories, and select partner factories who demonstrate a clear understanding of the environmental impact of their work, while also taking an active role in reducing environmental footprint.

We follow our own internal framework and set of guidelines which puts sustainable sourcing and project management at the core of what we do. We are committed to minimising our environmental impact, be it through our endeavours to ensure all packaging is fully recyclable, encouraging the use of products which are durable and multi use, and by promoting recyclable materials throughout the production process removing those materials which are difficult or impossible to recycle locally.

We work transparently across our supply and logistics chain to ensure sustainability is considered and thought out carefully at each stage of the process. We work with our suppliers to encourage them to purchase raw materials closest to their factories and have helped our factories set up their own recycling systems.

We can also offer reduced environmental shipping methods such as 'slow steaming', freight which minimises pollution by allowing a little more time for the shipping process. We actively encourage where possible building in greater lead-times to avoid more costly and environmentally expensive air freight options.

Our account management teams are knowledgeable on the latest and most up to date labelling requirements and offer guidance in this area as part of our service.

Wherever your environmental priorities lie, TCS can offer the solutions that you need. We are always looking at reducing the production of single use and non-recyclable products, so please do get in touch to see how we can work with you to create a sustainable solution for your promotion.

We're also working on resources for our clients and customers to encourage sustainable choices.

Eartha is our educational puppet character created to teach young children about the environment and simple, easy to understand ways to protect it.
